

Do you remember Annabelle and Harry spotted that the DNA from the cage and the door handles contained DNA from two people? Do you agree with them? Print out this page. Use the DNA profiles from Mr Baker and his son to work out who the 'number' has come from for each of the peaks. If it is from Mr Baker colour the peak in blue. If the number has come from Mr Baker's son colour the peak in red. If the number has come from both men colour the peak in yellow e.g. For the first set of numbers the '14' is from Mr Baker and should be coloured blue. The 16 is from both men and should be coloured yellow and the 17 is from Mr Baker's son and should be coloured red.

Do you agree with Annabelle and Harry? Does the cage have DNA from Mr Baker and his son? Go to the next web link to check your answer.
